PSAC North 4th Triennial Convention

Yellowknife, NT • May 30 – June 1, 2008

SCENT-FREE ENVIRONMENTS

Scent Free

Did you know that your perfume may be making some people sick?

There is a dramatic increase in people who are made sick by fragrances because so many products are now scented. Chemical fragrances are present in most soaps, shampoos and other hair products, cosmetics, deodorants, suntan lotion, aftershaves, colognes and lip balms to name a few. Sometimes, even products marked as “unscented” are falsely labelled and actually contain toxic fragrances.

For people who are sensitive to the toxic chemicals contained in scented products, this can mean serious medical conditions.

We want to create an environment where all members can participate and enjoy the convention. In order to make that happen, we are asking ALL participants to refrain from using scented products during the Convention.
